

1/32 E.E Lightning replacement canopy for Trumpeter kits

Parts and masks included in the set.

Remove the clear parts from the casting blocks by using a fine razor saw, or continuous scribing with a sharp scalpel. Finally prepare the edges with a file or sanding board.

The set has 3D printed parts these being the small mirrors that are placed central on the openable canopy. There are also canopy latches that are provided these are placed as shown in the pictures below, along the inner lower frame.

The large 3D part is a 'canopy' liner this fits within the canopy as shown.

Spares are provided for all the 3D parts, they are fragile and are a little brittle, they are best removed with a fine razor saw, or a sharp scalpel by continuous careful scoring from the casting blocks.

All of the parts either the printed or the clear can be glued to each other or kit parts by using a super glue, epoxy or PVA. Super glue will not 'bloom' or fog the clear resin like it does on kit clear parts, but care is still needed.

See the pictures attached for positioning.
