

1/48 Hawker Hunter T8M Conversion additional information

Please use these instructions in addition to the other instructions for the standard Hunter set. Note there are quite a lot of changes for this set and I have tried to document these as best as I can but specific information is difficult to find.

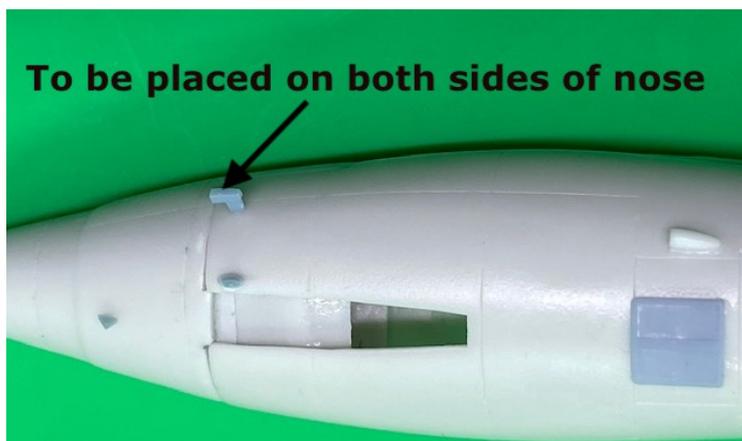

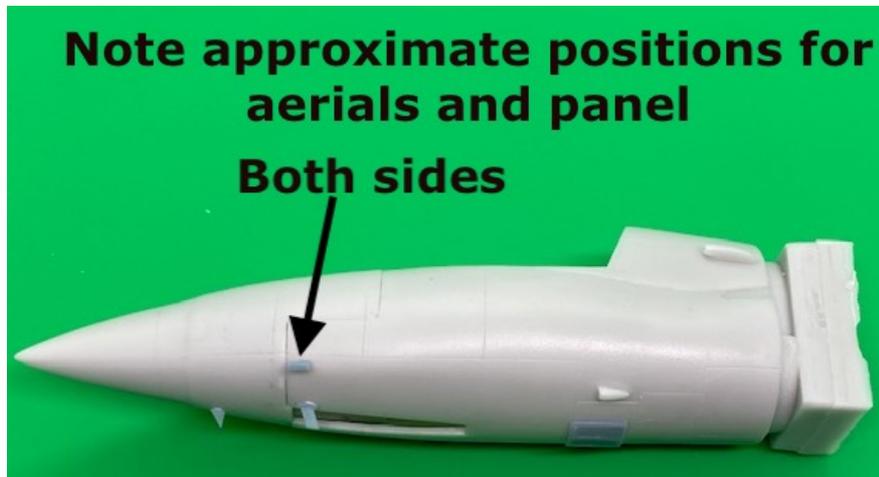

Please refer to the following websites for some of the best information that is available on the type. Note that the airframes changed through out their active careers so the modeller needs to determine what is the best configuration for a specific airframe at a point in time.

Underside of the fuselage with pale and tube positions

Alternate aerals on top of spine

Please remove the 3D parts with care a small razor saw or sharp scalpel is recommended. The 3D parts will work the same way as normal cast resin parts and can be sanded and trimmed in the same way. Super glue will be required to fix parts in position.
