

AEROCRAFT MODELS

1/72 de Havilland Cowling set for AZmodel kits

The picture above shows the cowl as it is from the printer the next shows it sanded and buffed, the last shows it with a few coats of paint on the printed cowl, not sanded or buffed.

Please trim all parts with a razor saw or very sharp blade.

The printed resin is quite brittle so do take care.

The parts will require some preparation, for the cowling and spinner it is suggested that you use fine sanding boards and sponges to obtain an almost perfect surface, if you use a buffer pad you can get a achieve a good surface, that way you can see if there are still any print layers you may still need to remove. A couple of light coats and a few more passes with a fine grit will prepare parts for final colour.

Parts will require to be glued with either super glue or epoxy, however I find a good white glue works well for exhausts spinner and propeller blades.
