armour**dog® rugged case for iPad Air 2**

ADASH104 - 5060329432987

Installation instructions

The armourdog® rugged case for the iPad Air 2 delivers a complete protection system without adding unnecessary bulk or weight. There are 4 main components to the case:

1) Silicon impact absorbing protective jacket
2) Hardened, polycarbonate inner shell
3) Hand pouch with 4 elasticated corner straps
4) Shoulder strap with phone / MPOS payment device holder

To ensure a correct fit, first remove the silicon jacket and insert your iPad into the hard protective shell. Line the camera up with the hole in the shell and slide the Kensington lock mechanism up so the iPad fits (then slide the lock back to hold the iPad in place. Next, insert the hard shell into the silicon jacket, taking care to match the camera hole. Make sure the four curved corner posts fit in the appropriate holes in the jacket.

Turn the iPad face down and rest the hand pouch on the back of the case, oriented as per the picture below. Stretch the 4 elasticated corners of the hand strap over the corners and pull them over the curved corner posts on the front of the case. Attach the shoulder strap for either a portrait or landscape position. The pouch on the shoulder strap can be used for a phone or MPOS, the small opening at the bottom of the pouch is a 'thumb' hole to allow for quick removal of the device.

Features

- Hardened, Polycarbonate shell with impact absorbent silicon wrap
- Ballistic Nylon hand and adjustable shoulder strap system
- Ergonomic hand-strap for landscape and portrait orientation
- Innovative shoulder pouch for MPOS chip-and-pin payment devices
- Tested to Military spec drop-test standard MIL STD 810G 516.6
