K1600 Oil Cooler Guard fitting instructions

Kit contains;
1 x Oil Cooler guard
2 x M5x20mm flanged button head stainless steel fasteners

It`s quite easy to fit as follows;

- Remove left and right hand OEM fasteners.
- Locate guard on place (you may need to manipulate the guard)
- Refasten the guard using the supplied longer fasteners

You can reuse the OEM fasteners if you want however it`s really difficult due to the short length of the fasteners which is why I`ve supplied 2 longer fasteners for you to use if you want to.
