PLASMA cutting and gouging systems

Plasma cutting is one of the most widely used processes in metallurgy and manufacturing. Its cutting speed and precision often give it the edge over flame cutting.

PLASMA TECHNOLOGY

Plasma cutting is a localised, fusion-cutting process in which the compressed jet of air pushes the metal to a melting temperature. GYS systems are portable and easy to use, with even higher cutting speeds than flame cutting. Due to its versatility, plasma technology offers the possibility of cutting a wide variety of conductive materials up to a thickness of 57 mm.

Main uses and applications:

- Cuts a variety of conductive materials including mild steel, carbon steel, stainless steel, aluminium, copper, brass and other ferrous materials.
- Straight / bevelled cut
- Automated cutting
- Highly accurate gouging
- Drilling
- Sheet metal marking

OXYCUTTING technology

The equipment is simple and the user can be up and running quickly. However, this process is rather slow and only suitable for cutting carbon steel. Oxy-gas is not effective on other types of metal such as stainless steel or aluminium. What’s more, the workpiece must be preheated before cutting, which further reduces productivity. Safety concerns arise from the use of acetylene, which is highly flammable and unstable (this combustible gas is most commonly used with flame cutting)

Main uses and applications:

- Cutting steel for manufacturing or dismantling it.
- Heating parts for bending, straightening, heat treatment.
- Loosening jammed or rusted parts and bolts

PLASMA CUTTING		OXYCUTTING
Material(s)	Conductive metals (Steel, Aluminium, Copper, Brass)	Carbon steel only
Thickness	Up to 57 mm	Up to 50 cm
Cutting quality	Excellent cutting angularity Small heat-affected area.	Good cutting angularity Large heat-affected area
Productivity	Fast cutting speed on all thicknesses.	Slow cutting speed. (The preheating time increases the cutting time).
Secondary operations	Minimal slag	Grinding and removal of surface oxidation almost always required.
Operating costs	Inexpensive (£)	Very expensive (£££)
Equipment cost	Expensive (££)	Inexpensive (£)
Portability	Yes	Yes
Gouging	Yes, very accurate	Yes
Safety	★★★	★

FOUR CUTTING ADVANTAGES

Cutting quality
Plasma cuts produce less slag (burrs).

Easy to use
No gas to adjust, no flame to control.

Productivity
Cuts more parts, faster and with fewer secondary operations.

Safety
No flammable gas required, uses only compressed air.

MECHANISED CNC CUTTING

The term «CNC» refers to «Computer Numerical Control». The torch’s movement is controlled by a computer on the cutting table using a computer program.

- Three advantages of automated cutting:**
- Consistent and reliable performance
 - Increased productivity
 - Optimised cutting quality

Glossary

Discover the technological features of our products as well as a brief explanation.

- PFC** **Power Factor Correction (PFC)**
PFC technology suppresses spikes and regulates the supply current. The electrical network is therefore better used, accepting supply voltages between 185 and 265 V and, therefore, favouring the use of extension cords or power supplies. Another important effect is that a power source equipped with this device consumes much less energy from the grid and allows it to be used on smaller circuit breakers (e.g. 16 A).
- FV** **Flexible Voltage**
This technology extends the supply voltage range of the PFC from 85 to 265 V (185 to 265 V for a standard PFC). They can therefore be used on 110 V or 230 V electrical networks.
- P400** **Protect 400**
Power sources equipped with this technology are able to withstand occasional or permanent voltage variations on the electrical network up to 400 V (lightning, engine-driven sets, load shedding, etc.).
- AD** **Anti-Dust**
In this type of design, the ventilation corridor is isolated from the electronic parts, which greatly reduces contact with external dust.

- Mechanised cutting**
Can be connected to a CNC cutting table.
- Internal air compressor**
Eliminates the need for a nearby compressed air source.
- Auto AIR**
Automatic management of air pressure and flow for optimal cutting.
- Open sheet mode**
Ideal for cutting work on perforated sheets
- Marking mode**
Ideal for surface marking and part identification.
- Gouging**
Removal of metal in an efficient, precise and clean manner

EASYCUT K25 & K35F

Built-in air compressor

With a cutting capacity of up to 15 mm, the EASYCUT K25 and K35F are manual plasma cutting machines with a built-in compressor. In the absence of compressed air, they are the perfect tool for any construction site.

- The internal compressor eliminates the need for an external air compressor and filter.
- No HF arc ignition to avoid electromagnetic interference.
- Equipped with a 4 m torch with trigger safety device to prevent accidental or unintentional triggering.

MADE IN FRANCE

Compressor inside

EASYCUT 30 FV

Designed for body shops

The EASYCUT 30 FV is a 30 A plasma cutter with a 10 mm steel cutting capacity (15 mm in separation). Its HF-free priming system extends the life of the consumables. Designed for maintenance work, such as car bodywork, it has a very robust mechanism and a simple interface with flow meter.

- Easy-to-use control panel with a single potentiometer for adjusting the cutting intensity.
- No HF arc ignition to avoid electromagnetic interference
- Manual air pressure adjustment (2.5 < 9 bar) with front panel flow meter
- Equipped with a 4 m detachable torch equipped with a safety device on the trigger to prevent accidental or unintentional triggering.

EASYCUT 25 & 40

Ultra compact

The ultra-compact EASYCUT 25 and 40 plasma cutters are ideal for easily cutting all types of metal up to 20 mm thick. With a power rating of up to 40 A, they excel at low-current precision cutting. Ideal for the workshop, they offer true portability without sacrificing cutting performance.

- Compact and lightweight, they provide excellent mobility.
- Easy-to-use control panel with a single potentiometer for adjusting the cutting intensity.
- No HF arc ignition to avoid electromagnetic interference.
- Manual air pressure adjustment (2.5 < 6.5 bar) with front bar graph.
- Equipped with a 4 m detachable torch with trigger safety device.

CUTTER 45 & 70 CT

Portable for industry

The professional-grade plasma cutters, the CUTTER 45 CT (single phase) and 70 CT (three phase) can cut metal up to a thickness of 35 mm. The CNC interface and the automatic, AT-70, industrial torch enable a completely mechanised operation.

- Easy-to-use control panel with a single potentiometer for adjusting the cutting intensity.
- Three working modes: Cutting, trigger-lock cutting and cutting of perforated sheets.
- Pre-wired for use on automatic cutting table (optional CNC-1 analogue kit).
- No HF arc ignition to avoid electromagnetic interference.
- Manual air pressure adjustment (4.1 < 6.5 bar) with front bar graph.
- MT-70 premium torch designed to withstand impact and heat.

NEOCUT 105 & 125
State-of-the-art technology

With a high capacity for manual or mechanised cutting, NEOCUTs are the ideal solution in industrial environments. Its 100% duty cycle up to 125 A enables it to cut parts up to 57 mm thick. Equipped with automatic air pressure management, they offer optimal cutting quality throughout the life of the consumables.

- Automatic management of pressure and air flow according to the set current.
- Six working modes: cutting, trigger-lock cutting, gouging, triggerlock gouging, cutting of perforated sheets and marking.
- Marking mode, ideal for tracing and identifying parts.
- No HF arc ignition to avoid electromagnetic interference.
- Pre-wired for use on automatic cutting table (optional analogue/ digital CNC kit).
- Monitored wear and tear of consumables (nozzle and electrode).
- Easy software updates via USB cable with no tools or disassembly required.
- OLED display and multilingual interface: easy to use, with all settings at the touch of a button.
