NGK
SPARK PLUGS
40 YEARS SERVICING THE
UK AUTOMOTIVE INDUSTRY

TRUST.
They did. Still do.

Lasting relationships are built on trust and respect. Our relationship with Honda was forged in 1965 when we helped them on their way to their (and our) maiden Formula One victory. Today that bond is as strong as ever with NGK spark plugs chosen as OE fitment across their range of road cars and their latest Formula One power plant.

FITTED AS ORIGINAL EQUIPMENT AROUND THE WORLD

Alfa Romeo	Citroen	Honda	Lancia	McLaren	Proton	Subaru

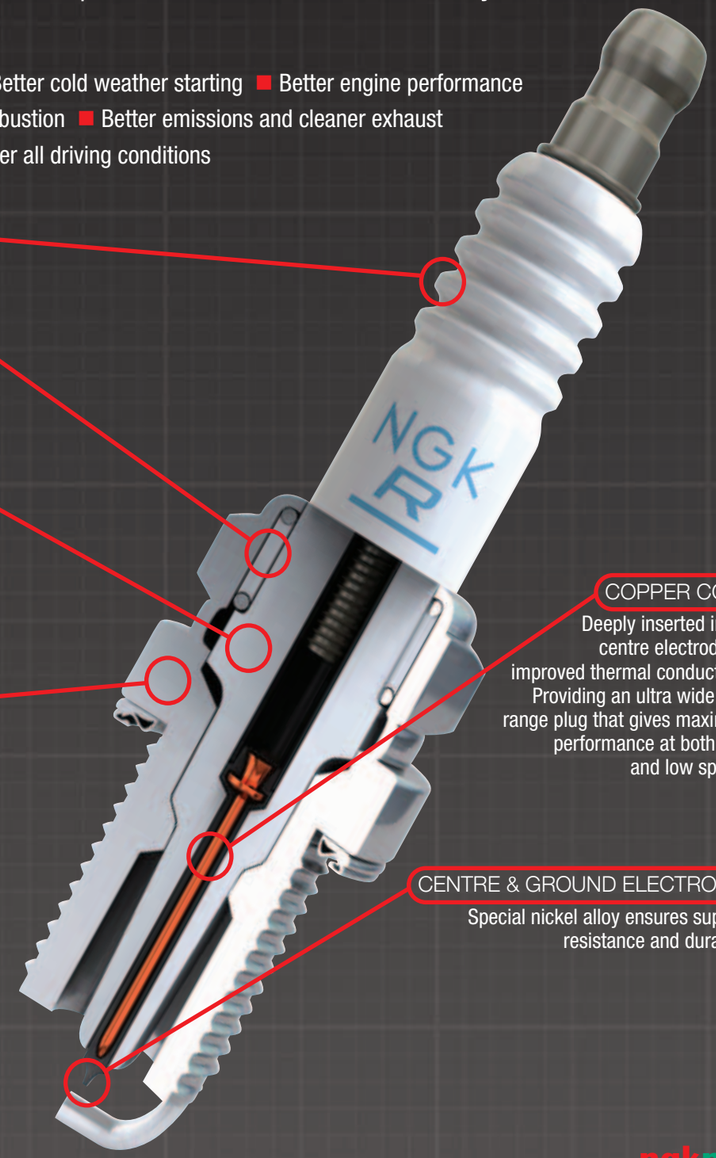
NGK

TRUST.

As the world's No.1 OE manufacturer of spark plugs and the pioneers of copper core technology, trust NGK to deliver optimum performance whatever car you drive

- Perfect ignition
- Better cold weather starting
- Better engine performance
- More complete combustion
- Better emissions and cleaner exhaust
- Wider heat range over all driving conditions



CORRUGATIONS
To prevent flash over

SPECIAL PACKING
Excellent air tightness
Robust construction

INSULATOR
Made of high purity alumina providing better heat dissipation, higher electrical insulation and stronger thermal shock resistance

METAL SHELL
Plated and chromated to guard against corrosion

COPPER CORE
Deeply inserted in the centre electrode for improved thermal conductivity. Providing an ultra wide heat range plug that gives maximum performance at both high and low speeds

CENTRE & GROUND ELECTRODES
Special nickel alloy ensures superior resistance and durability

This catalogue is intended for vehicles/engines officially imported or manufactured in the UK and supersedes all previous versions, which should be disposed of. Whilst every care is taken in compiling these lists of applications, they are given for general guidance only, and do not constitute any contractual term, representation or warranty and as such NGK Spark Plugs (UK) Ltd. do not accept any responsibility in respect of any claim whatsoever and howsoever caused arising from the publication of this catalogue.

NGK and NTK products are designed solely for use in automotive, motorcycle, marine, horticultural, agricultural, commercial, industrial, and stationary engines.

NGK and NTK products should not be used in aircraft engines.

Resistor spark plugs should always be used where they are recommended by the manufacturer. The use of non-resistor plugs could, in some cases, result in interference with and/or damage to electronic components.

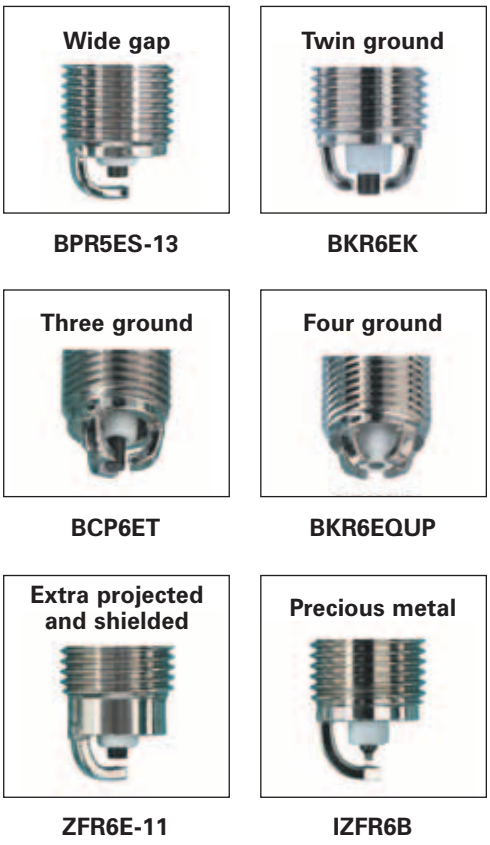
NGK and NTK products listed in the application guides do not apply to racing or modified engines, except where explicitly stated.

SPARK PLUG DESIGN

Every year the range of NGK spark plugs grows to accommodate the ever increasing demands of modern engines. Spark plug design must take into consideration many features of an engine including physical dimensions, combustion chamber shape, cooling abilities, fuel and ignition systems. Spark plugs play a vital role in producing the maximum power from an engine whilst keeping fuel consumption and emissions to a minimum. Choosing the correct spark plug type will help a vehicle manufacturer meet legislated emission targets and assists the motorist in getting the best from their engine.

Increases in the size and the requirement to improve the cooling of the inlet and exhaust valves have meant that the space available for the spark plug is severely restricted on some cylinder heads. A change in spark plug design, possibly the adoption of a taper seat and extended reach (threaded portion) or even the use of a smaller diameter is often the answer. Some engines require the use of two spark plugs per cylinder and again due to space restrictions these might be of different sizes.

Changes in fuelling systems and the fuel itself have meant some special features being adopted at the 'firing end' of the spark plug. Extra projected types push the spark position into the heart of the combustion chamber to promote better combustion of the fuel/air mixture, which is weaker than ever in an effort to improve economy. Modern engine manufacturers often require increased spark gaps to allow a longer spark duration, which again aids more efficient combustion.



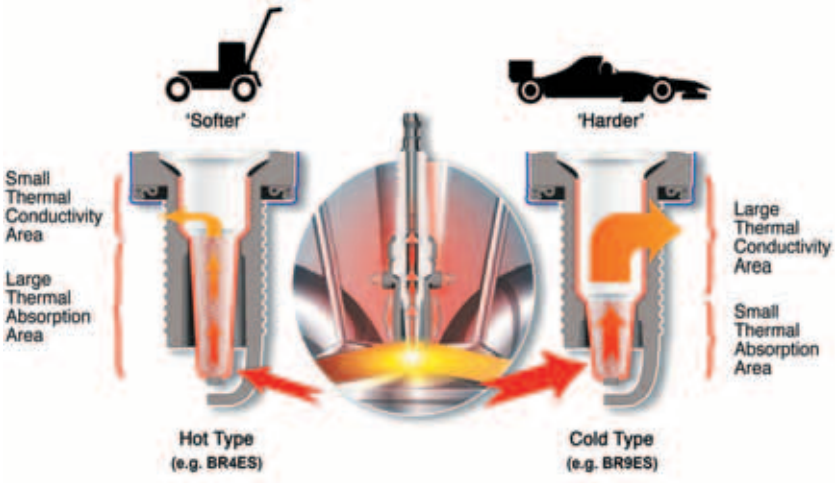
To combat the 'cold fouling' effect that can occur in some engines using unleaded fuels specially arranged ground electrodes are sometimes used. These can force the spark to discharge across the insulator and thus burn away any built up carbon that could cause poor starting or misfires. It is not uncommon to find two, three or four ground electrode arrangements in new vehicles. The use of precious metals on the tips of the spark plug electrodes is not uncommon especially on higher performance engines. Whilst these spark plugs do have increased service life they are often specified because of their superior ignition qualities.

Our engineering departments work very closely with the engine and vehicle manufacturers to produce the ideal spark plug type for each application. Any change in production is expensive for a manufacturer and therefore new spark plug types are only produced where necessary. NGK employ the very latest production technology to ensure that every aspect is catered for – performance, economy and value.

HEAT RANGE AND HEAT DISSIPATION

Spark plugs do not produce heat in the combustion chamber. One of the functions of the spark plug is to dissipate some of the heat produced during combustion. This is mostly transferred into the cylinder head. The 'Heat Range' indicates the measure of the spark plug's ability to do this. A 'hot' spark plug is designed to maintain a sufficiently high temperature at the insulator nose to burn off carbon and oil deposits. A 'cold' spark plug is designed to allow a faster transfer of heat to the cylinder head thus preventing overheating and premature failure.

The heat range selection is obviously a complex task with many factors to take into account. NGK engineers therefore make specific recommendations for each engine and the use to which it is put.



NGK'S COPPER CORE TECHNOLOGY

WIDE HEAT RANGE

A wide range spark plug is more flexible and performs equally well in a hot or cold engine under stop and go city driving or fast motorway cruising. Engines that tend to run hot need cold type plugs. Those that run cold demand a hotter type. The specific plug for any engine is determined by the plug's heat range. That is the minimum and maximum temperatures between which the plug will offer optimum performance.

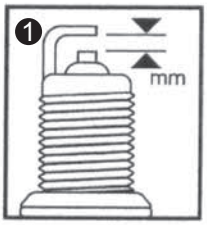
The heat range of NGK Spark Plugs is wider than ordinary plugs therefore they are suitable for both high speed and low speed driving. Compared with conventional plugs of the same pre-ignition rating they have more resistance to fouling. Compared to ordinary plugs with equal anti-fouling resistance, NGK Spark Plugs have a higher pre-ignition rating.

NGK'S HEART OF COPPER

Copper wire used in place of the iron core in conventional plugs is the secret of NGK's Wide Heat Range. Copper's superior heat conductivity dissipates heat quicker. It cools the electrode tip and insulator tip which prevents hot spots that could cause pre-ignition. Increased heat resistance does not affect fouling resistance, which is primarily determined by the insulator nose length. The longer the nose, the more susceptible it is to heat and the more free from fouling. By raising the pre-ignition rating with the high conduction copper and leaving the insulator nose long, NGK produces the Wide Range Plug. One that meets the broad thermal requirements of engines under high and low RPM conditions. All the spark plugs in the Automotive Catalogue have a copper core.

FIRING END APPEARANCE

SPARK PLUG INSTALLATION TIPS



- Refer to current NGK catalogue for correct spark plug selection
- Check condition and cleanliness of threads in cylinder head
- Ensure plug is gapped according to vehicle manufacturers specification *(fig 1)*
- Multi ground electrode and precious metal plugs should not be regapped - visual inspection only
- Install new spark plug *by hand* until it seats - *(fig 2)* a length of rubber tubing pushed over the insulator can be a useful aid for plug installation where access is difficult
- Tighten to specified torque setting as shown in the chart below *(fig 3)*
- If a torque wrench is unavailable then refer to vehicle/engine manufacturers installation instructions or the tightening angle advice which is displayed on current NGK packaging (excluding specialist race plugs). Note that this angle advice can differ between part numbers due to individual spark plug design (e.g. seating type, thread diameter and gasket material)
- It is important not to over or under tighten spark plugs during installation. Over-tightening can lead to distortion of the spark plug. Under-tightening can cause overheating due to poor heat dissipation. *In extreme cases incorrect tightening can cause spark plug breakage and/or engine damage*
- NGK does not recommend the application of lubricant to spark plug threads as the resultant reduction of frictional forces at the thread faces will render the torque charts inaccurate and over tightening could occur
- If a gasket type spark plug is re-installed, it should only require a further 1/12 of a turn after it has been seated
- Always carefully use the correct tools for removal/installation to prevent damage to the spark plug or engine
- Inspect spark plug cover and renew if necessary

❸	FOR FLAT SEAT TYPE (WITH GASKET)					TAPER SEAT TYPE	
Thread Ø	**18mm**	**14mm**	**12mm**	**10mm**	**8mm**	**18mm**	**14mm**

CONVERSION CHART (SPARK PLUGS)

IMPORTANT:

This chart is furnished as a guide only. Certain design differences may exist between our spark plugs and another manufacturers; heat ratings can also vary. Always refer to the main application data to select the recommended spark plug for specific engines.

NGK GLOW PLUG TYPES AND FEATURES

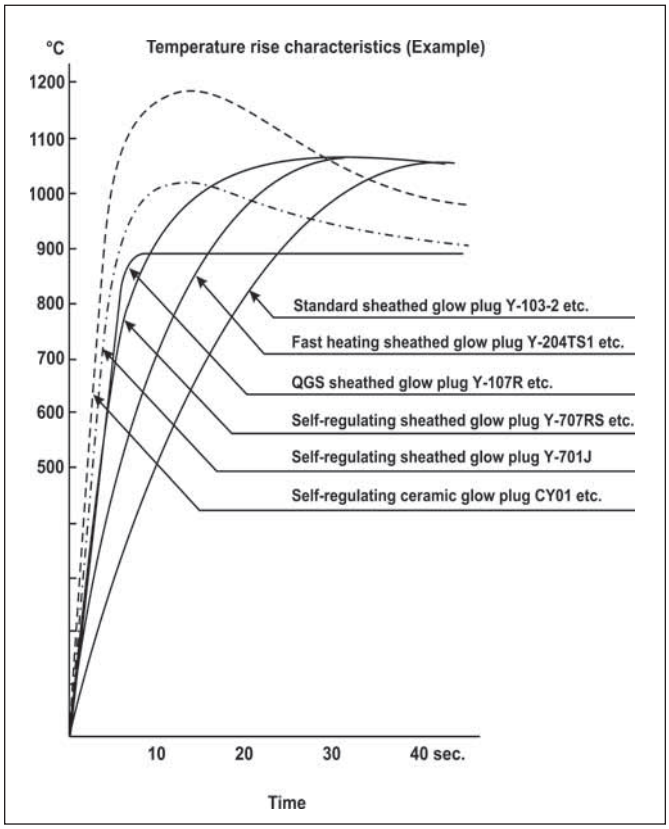
METAL SHEATHED GLOW PLUGS

Single coil types
A standard single coil glow plug heats at a fairly uniform rate to its maximum temperature with a constant current consumption. Rapid Glow types have a single coil which changes its resistance as the temperature rises. This allows an initial high current draw to promote faster warm up, with a reduction in current draw as the temperature rises.

QGS Types
Quick Glow System glow plugs are available in single & double coil types. They both a very low resistance heating coil to allow enormous current flow for a very fast heating time. These glow plugs require strict regulation to prevent damage and are only d with a specifically designed QGS controller.

SRM Types
Self-Regulating Metal glow plugs contain two coils. The heating coil at the tip of the probe provides the heat source; the second (regulating) coil allows an extremely fast warm up time to temperatures in excess of 900°C and once this temperature is reached can autonomously maintain a high final temperature allowing longer post heating times.

AQGS Types
Advanced Quick Glow System glow plugs reach 1000°C in 2 seconds and can maintain this high temperature for long-term post glow capability to promote cleaner vehicle emissions.



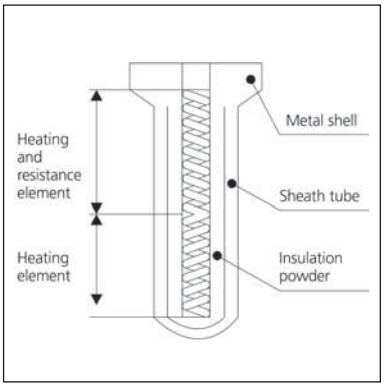
CERAMIC GLOW PLUGS

SRC Types
Self-Regulating Ceramic glow plugs reach temperatures in excess of 1000°C. With the of ceramic, these glow plugs are afforded the greatest protection from the prolonged high temperatures involved with extended post glow heating periods.

QGS Types
Similar to the metal sheathed QGS types, but offers faster heat up times to greater temperatures, although still requires strict regulation with a specialist QGS controller.

NHTC Types
New High Temperature Ceramic glow plugs the latest technology to allow extremely fast heat up times to eliminate the concept of pre-glow. They also have the ability to maintain post glow temperatures as high as 1350°C to further help vehicle manufacturers reduce engine emissions.

Double Coil Type



GLOW PLUG DESIGN SYMBOLS

Current style

Y – 2 0 4 T S 1

Y or YS = Sheathed Type
(earthed through body)

YD = Sheathed with double insulator (for wiring in series)

Modification Or Revision

Some types with suffix 1, 2 etc. are sometimes interchangeable with those without the suffix - but not always. The occurrence of this will be rare for the UK market.

Thread Diameter

1 = Ø 10mm
2 = Ø 12mm
3 = Ø 10mm
4 = Ø 14mm
5 = Ø 10mm Double Coil
7 = Ø 10mm Double Coil
8 = Ø 18mm
9 = Ø 12mm Double Coil

Special Tube Material

For Higher Temperatures

Heating Characteristic

K or No Letter = Standard type
V = Fast Heat or Rapid Glow type
T = Fast Heat or Rapid Glow (faster than V type)
M = QGS type (Quick Glow System only)
R = QGS type (faster than M type)
U = QGS double coil type
J = SRM (Self Regulating Metal) type

Battery Voltage

0 to 4 = 12 Volt
5 to 9 = 24 Volt

Serial Number

New style

(Other characters as above)

Y 1 008 A S 1

Thread Diameter

1 = Ø 10mm
2 = Ø 12mm
4 = Ø 14mm
8 = Ø 8mm
9 = Ø 9mm

Serial Number

001 to 899 = 12 Volt
901 to 999 = 24 Volt

Heating Characteristic

A = AQGS type (Advanced Quick Glow System)
J = SRM (Self Regulating Metal) type

Y E 04

Ø 8 & 9mm SRM
Self Regulating Metal
Type

Ceramic

CZ 304

Serial Number

Y = Self Regulating Type
Z = QGS Type
X = QGS (Double Insulator) Type

Some glow plugs have been subject to supersession, see page 120 for a table of affected part numbers.

CORRECT OF GLOW PLUGS

It is essential that the correct voltage and current are d in line with the vehicle manufacturers recommendations. If the voltage or battery capacity is too low, the glow plug will not get hot enough and the vehicle may fail to start. If the voltage is too high the heating coil may melt or the glow plugs service life will be reduced.

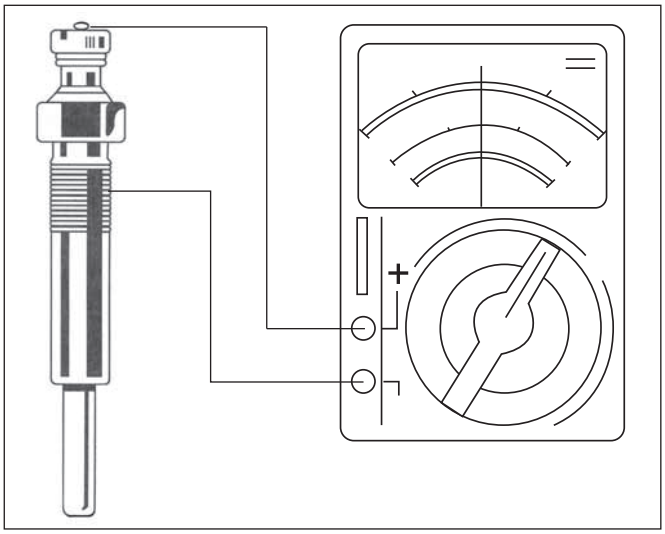
The pre-heating time of glow plugs can vary significantly, dependant upon the technology of the glow plug in . For example, standard type glow plugs may take 20 seconds to reach 800°C, whereas the latest ceramic types can reach in excess of 1000°C in 2 seconds.

If starting difficulties are experienced, continuous cranking or leaving the ignition switched on without the engine running can lead to premature failure of the glow plugs and draining of the battery. A better method is to switch the power off and retry the starting procedure after a short period of time.

Thread Diameter	Tightening Torque
8mm	8-15Nm (0.8-1.5Kgm)
9mm	7.65-9.35Nm (0.7-0.9Kgm)
10mm	15-20Nm (1.5-2.0Kgm)
12mm	20-25Nm (2.0-2.5Kgm)
14mm	20-25Nm (2.0-2.5Kgm)
18mm	20-30Nm (2.0-3.0Kgm)

Testing Sheathed Type Glow Plugs

In order to check the heating coil, measure its resistance as shown in the diagram (excluding double insulated, YD, CX type part numbers). Some resistance values are extremely low (such as some QGS types) and should only be tested with an Ohmmeter capable of recording values down to 0.1Ω. Testing glow plugs by connecting directly across a battery is NOT recommended as, apart from risk to personal injury, damage can occur to the internal construction of the glow plug if it is not designed to have continuous voltage applied (e.g. QGS types).



Resistance value ∞ : The heating coil is broken

Resistance value less than 5 Ω : The heating coil is in good condition

INTERPRETATION OF GLOW PLUG APPEARANCE

Appearance	Cas	Recommended Counter Measure
Melted Heater Tube	**1. Abnormal Overheating** a) Incorrect fuel injection timing or volume flow rate. b) Abnormal combustion due to excessive lubricating oil entering the combustion chamber. **2. Excessive Voltage** a) Incorrect glow plug has been fitted. b) Faulty controller relay or glow plugs switched on too long.	a) Check fuel injection. b) Check valve guides and piston rings. a) Confirm glow plug part number is correct. b) Check controller relay operation.
Heating Coil Broken ∞ Resistance	a) See excessive voltage above. b) See carbon build up below.	
Broken Heater Tube	Excessive turbulence or overheating due to incorrect fuel injection timing or volume flow rate.	Check fuel injection timing and volume flow rate.
Shiny appearance on heater tube Swirl marks on heater tube Carbon build up at taper seat area	Build up of carbon surrounding glow plug heater tube in combustion chamber.	Ream excessive carbon from glow plug hole prior to fitment.

SPARK PLUG COVERS

STANDARD PLUG COVERS

EPDM RUBBER PLUG COVERS

The NGK range of resistor covers are designed to give perfect noise suppression across all frequencies whilst engine performance is not adversely affected whatsoever.

Featuring a resistor element pressed in between the plug terminal and the high tension wire connection, the construction is extremely durable, the resistor element is long enough to prevent interior flashover, and steady resistance is maintained. Superlative ceramic materials are incorporated that resist deterioration and have small resistance variation under over-load, whilst the plug connector is made of sturdy phenolic resin, practically oblivious to tremendous heat and high tension, and very rugged rubber material. The heat press insertion makes the construction all the more tough and vibration-resistant. Special rubber liners on both ends prevent moisture from causing electrical leakage.

All motorcycle manufacturers now comply with current legislation which demands a standard of noise suppression on every vehicle. This is achieved usually by fitting NGK resistor covers though in many cases a combination of NGK resistor covers and NGK resistor spark plugs (R type) is necessary to satisfy the ministry tests. It is emphasized that despite the use of of both resistor covers and spark plugs in such engines, due to the unique and superior construction of NGK products there is no loss of performance or shortening of service life.

LBO5EMH and SDO5FM being of tough EPDM rubber construction are intended for competition/trial applications.

COVER SYMBOLS EXPLANATION CHART

	External appearance
L	90° Elbow Type
S	Straight
X	102° Elbow Std.
V	120° Elbow (Long)
Y	120° Elbow (Short)
T	'T' Type

	Suitable Ø Plug Thread
B	14 mm minimum
C	10 mm minimum
D	10 & 12 mm
Z	10, 12 & 14 mm

	Resistance
None	Non-resistor
01	1 k Ω
05	5 k Ω
10	10 k Ω

	Suitable Terminal Type
E	Terminal nut or solid post
F	Terminal stud

	Special Feature
A	Special design
H	Compact type
P	Special waterproof cover
K	Silicon waterproof cover
M	Rubber sheathed
G	With rubber grommet
W	Double connector springs
F	For Ø 5mm HT cable
L	Inductive resistor type
Y	With handle
Z	Special design

To assist in identifying the red or blue coloured variant for popular plug covers a small change to the descriptive part number has been instigated. Implementation will be managed on a running change basis i.e. when current stocks are exhausted orders will be fulfilled by supplying the replacement item. There is no change to the Stock Number. Black covers which are considered standard are unaffected.

Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
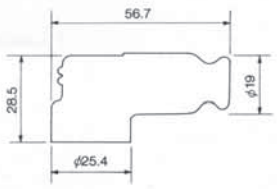
TRS1408F-B	8871	Blue	5 kΩ	14mm	***Special****

Description: 90° Compact Type — Material: Silicon Rubber

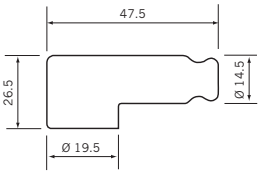
***Suitable for use with R5300A-□ racing spark plugs only**



Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
TRS1409-R	8733	Red	None	14mm	

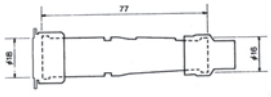
Description: 90° Compact Type — Material: Silicon Rubber

***Suitable for use with R5540F-□ racing spark plugs**



Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
SD05EG	5818	Black	5 kΩ	10 - 12mm	

Description: Straight Type — Material: Phenolic Resin



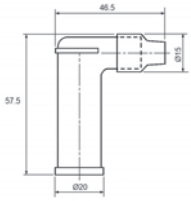
See page 159 for plug cover symbols explanation

SPARK PLUG COVERS

Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
L05EA	6667	Black	5 kΩ	14mm	

Description: 90° Elbow Type — Material: Phenolic Resin

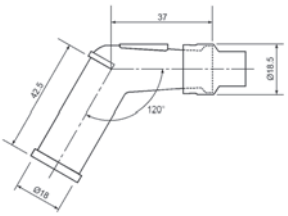
Application: Piaggio (various 125, 150cc)



Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
V05E	6665	Black	5 kΩ	14mm	

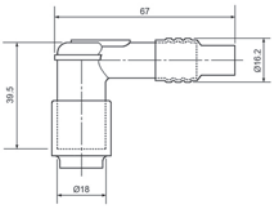
Description: 120° Elbow (Long) Type — Material: Phenolic Resin

Application: Piaggio (various 125, 150cc)



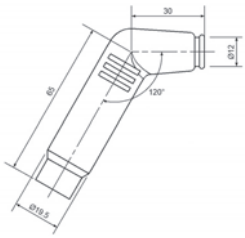
Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
LB05EPK	8342	Black	5 kΩ	14mm	

Description: 90° Elbow Type — Material: Phenolic Resin



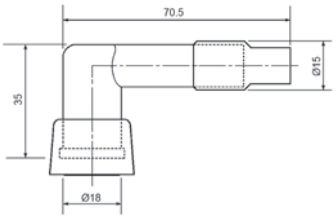
Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
VD05EM	8422	Black	5 kΩ	10 - 12mm	

Description: 120° Elbow (Long) Type — Material: EPDM Rubber



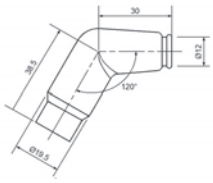
Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
LB05EZ	8744	Black	5 kΩ	14mm	

Description: 90° Elbow Type — Material: Phenolic Resin



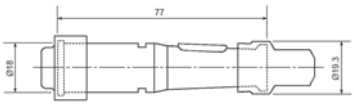
Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
VD05EMH	7744	Black	5 kΩ	10 - 12mm	
VD05FMH	8425	Black	5 kΩ	10 - 12mm	

Description: 120° Elbow (Compact) Type — Material: EPDM Rubber



Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
SD05FP	8325	Black	5 kΩ	10 - 12mm	

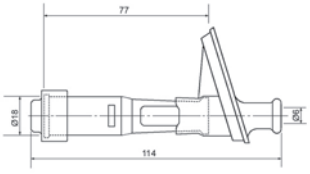
Description: Straight Type — Material: Phenolic Resin



Part No.	Stock No.	Colour	Resistor	Ø Plug	Terminal Type
SD05FGA	8683	Black	5 kΩ	10 - 12mm	

Description: Straight with Grommet — Material: Phenolic Resin

Application: Honda VT600, XL600



See page 159 for plug cover symbols explanation
